Setting Up ArcMC for Azure

HPE ArcSight Management Center is available for deployment from the Azure Marketplace. It is designed as a virtual appliance containing the required operating system and ArcSight Management Center software pre-installed.

Launching an Instance of ArcSight Management Center

This procedure assumes that you already have an Azure portal account.

1. Log in to the [Azure Marketplace](#) site with your existing Azure credentials.
2. Click **New**, and then, in the search box, enter HPE ArcSight Management Center.
3. In the search results, pick the latest version of ArcSight Management Center.
4. Select a Deployment Model, and then click **Create**.
5. Enter the basic details about the virtual machine on the next screen such as Name, User Name, SSH public key, Resource Group, Location, and so on. Then, click **OK**. Note: Username must be entered as "centos".
6. Choose a size and click **Select**.
7. Optionally, edit the Settings as needed, and click **OK**.
8. All inputs will be validated, and if the validation is passed, click **OK** to continue.
9. On the next screen, accept the purchase agreement and click **OK** button to start the virtual machine deployment.

Once the virtual machine is ready (in the running state), connect with SSH as "centos" user and the password or SSH key provided during the deployment of the virtual machine.

Configuring ArcMC for Azure

Perform the following steps to set a new password for the admin account, and then update the license key.

1. Locate the public or private IP address assigned to the ArcMC for Azure VM. Then,
`ssh -i <private_key> <user>@<azure-assigned-address>`

2. Using sudo access, change the user to 'arcsight' user.
3. Start the application by running the following command: `/opt/arcsight/current/arcsight/arcmc/bin/arcmcd start`
4. Execute `'tail /var/log/boot.log'` to view the initial admin password.
5. Set a new password for the admin account. Browse to the web UI at: `https://<azure-assigned-ip-or-hostname>:9000/`

Username: admin

Password: (Note that ArcMC for Azure will force a password change on first login)

6. Update the license key of the ArcMC for Azure instance.

Next Steps

Configure HPE ArcSight SmartConnectors to pull or receive logs from devices and applications.

- Update DNS or the `/etc/hosts` file of the ArcMC instance with the hostnames of the ArcSight ESM or Logger instances.
- The ArcMC instance contains 3 empty containers for ArcSight SmartConnectors. Follow the ArcSight SmartConnector documentation to integrate devices and applications with ArcMC for Azure.
- If needed, deploy more SmartConnectors by launching additional ArcMC for Azure instances from the Azure Marketplace.

Additional Information

For additional information on the use and operation of ArcMC for Azure, see the HPE ArcSight product documentation, available from HPE ArcSight Product Documentation:

<https://www.protect724.hpe.com/community/arcsight/productdocs>.
