ArcSight ESM Event Data Transfer Tool 1.2

These release notes describe what is new in this release, as well as other information about recent changes and open issues.

What's New in This Release

This topic describes the new features and enhancements added in the ESM Event Data Transfer Tool, version 1.2.

Support for Hadoop 2.7.2

This version of the Event Data Transfer Tool now supports Hadoop 2.7.2.

Export-File Extension Validation

The Event Data Transfer Tool Now checks to ensure that event data exported in the keyvalue or CEF formats use the .TXT file extension and files exported as comma-separated values use the .CSV file extension. If the format does not match the file extension the tool gives you an error message so you can make the extension match the format and reissue the command.

Verifying the Downloaded Installation Software

HPE provides a digital public key to enable you to verify that the signed software you received is indeed from HPE and has not been manipulated in any way by a third party.

Visit the following site for information and instructions:

Fixed Issues

Item	Description
NGS-19632	Previously, as the thread count increased the number of events dropped during transfer would increase proportionally. Events are no longer dropped..
NGS-19295	Previously, specifying a <code>-dpath</code> with the <code>.gx</code> extension would create a compressed file that was not in gzip format and could not be uncompressed. That issue is now fixed.
NGS-18993	Previously, Files generated in CSV format were not properly generated. Now CSV files are generated correctly.

Open Issues

Item	Description
NGS-19957	If you run the tool as a different user than installed it, an error occurs. Make sure you run this tool as the same user that installed it.
NGS-19561	If you run the tool as a different user than installed it, and you do not provide a file extension, you get <code>java.lang.Exception: unrecognized output format error</code> . Run the tool as the same user that installed it and provide a file name extension.
NGS-19912	If Hadoop runs out of space during a data transfer, the Event Data Transfer Tool exits with an Events Writer error. If you get this error, create more space in the Hadoop cluster and rerun the data transfer, if it was incomplete.

Send Documentation Feedback

If you have comments about this document, you can [contact the documentation team](#) by email. If an email client is configured on this system, click the link above and an email window opens with the following information in the subject line:

Feedback on Release Notes (ESM Event Data Transfer Tool 1.2)

Just add your feedback to the email and click send.

If no email client is available, copy the information above to a new message in a web mail client, and send your feedback to arc-doc@hpe.com.

We appreciate your feedback!
