

# DevSecOpsialidocious Software Assurance Program

October 2019

# Who am I

—

- 23 years in IT
- 13 years in Enterprise Security
- 10 years Application Security

# Who we are

Saltworks is an application security company. We partner with organizations to build world class application security programs.

# Why we exist

Obvious industry need for security partners that can provide a holistic end to end approach

## “Policy to Production”

Integrated (Dev & Sec)

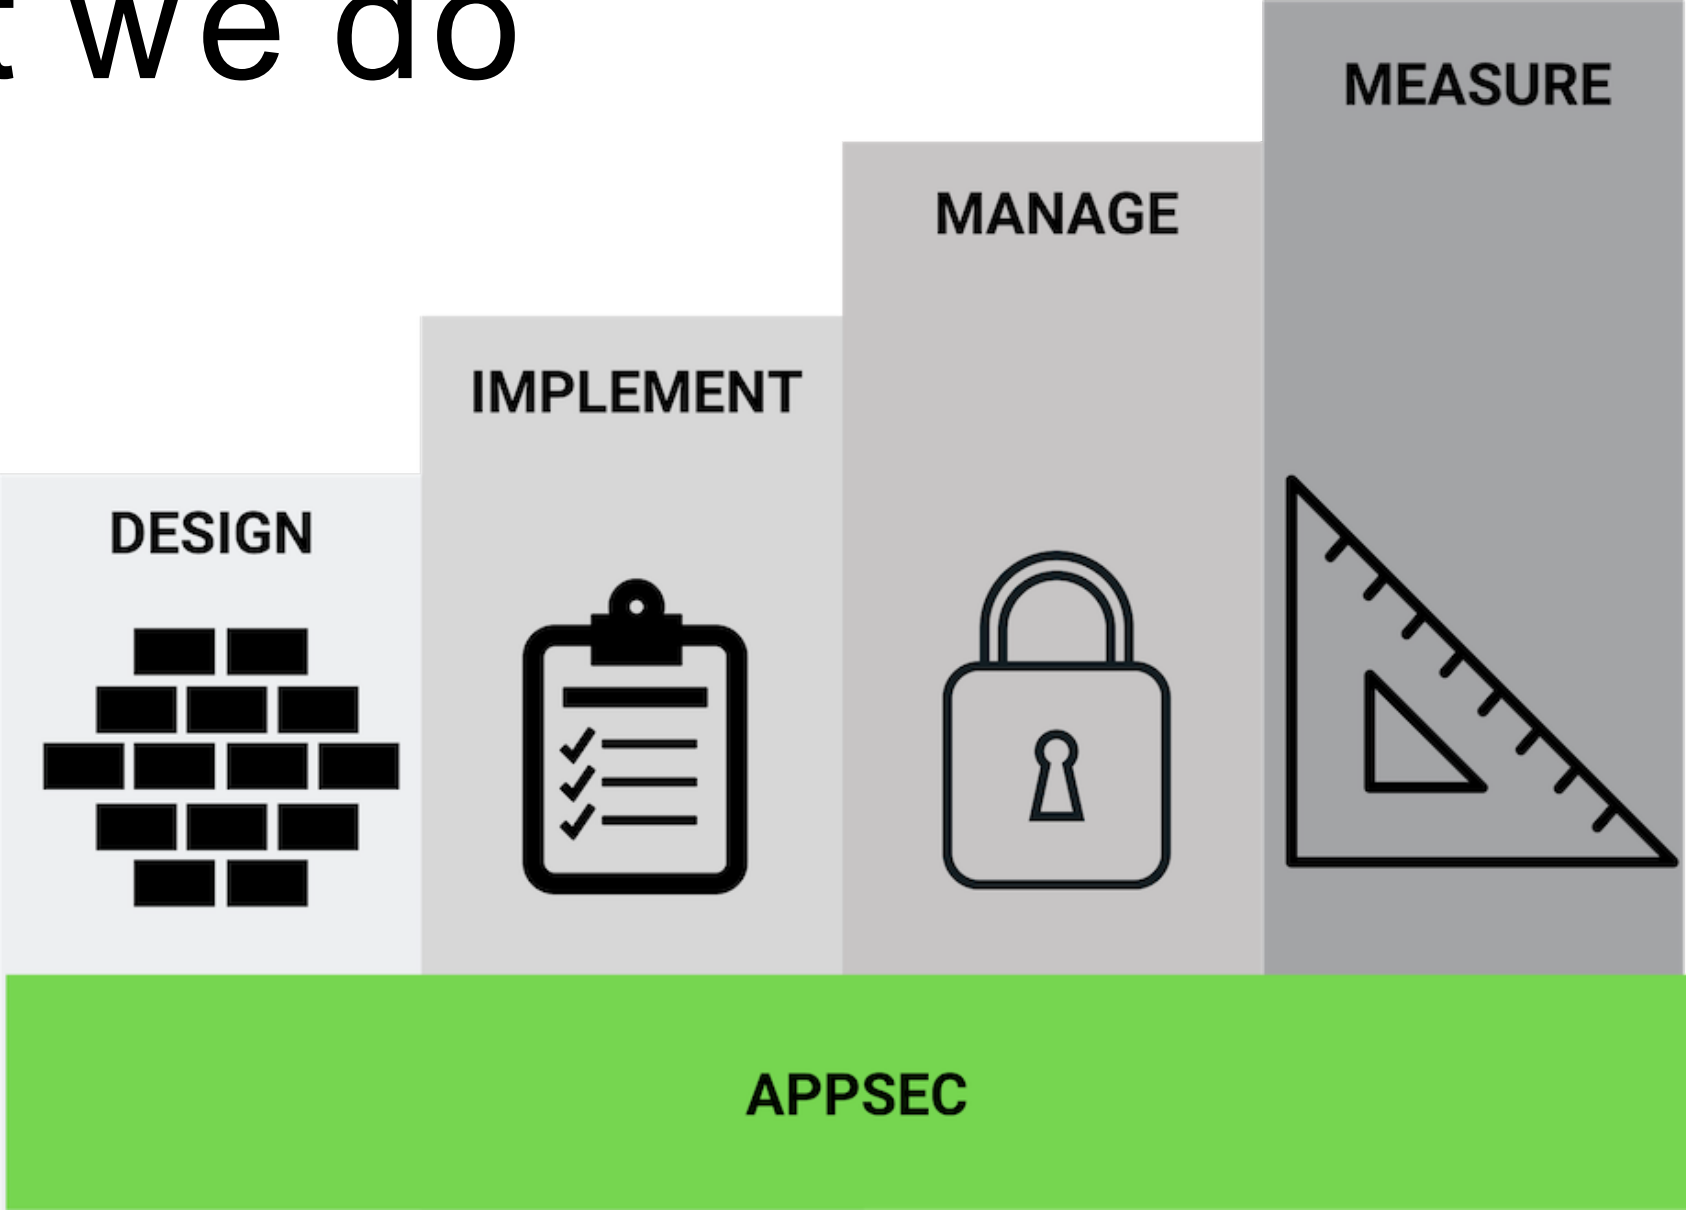

Risk-Based App Sec Approach

Measurable process

# What we do

# Design

*Application Security that  
Keeps You Moving at  
Market Speed*

Application security program design must balance the needs of security and business agility, and provide a clear path to releasing software on time and in compliance with corporate and industry standards. Successful programs work with - not against - your established software development culture and environment. We will...

- Study your software production pipeline
- Create a design that works with your established policies and procedures
- Work with your team to clearly articulate security requirements and milestones
- Actively avoid cookie-cutter templates and generic checklists in favor of thoughtful, customized design that meets unique needs

## Maturity

- Maturity Assessments and Modeling

## Governance & Policy Development

- Defining pre-production security standards
- Establishing governance to create the organizational support needed to ensure these policies are being followed and staying pertinent over time
- Developing both of these elements in the context of your business

## Security Planning & Integration

- Reviewing current security activities to identify areas where changes are needed
- Creating new activities/tools and streamlining processes to align with current development procedures
- Working on design and architectural elements as well as coding activities and security testing.

# Implement

*Everything You Need to Hit the Ground Running*

Our team of experts are program acceleration specialists. We will tool your DevOps pipeline to support your customized security plan. Today's market demands won't let software development wait for security to catch up. We have the expertise and experience to take your program from planning to reality quickly, efficiently and predictably.

## Integrated Secure Design & Coding Practices

- Implementing customized solutions to seamlessly incorporate security activities across SDLC
- Leveraging automation wherever possible
- Working with a
- Improving security outcomes and minimizing release disruption

## Testing & Validation

- Identifying security weaknesses before and after production
- Validating security practices through testing
- Evaluating the effectiveness of security practices

## Training & Socialization

- Working closely with your team to train and educate
- Creating initiatives that deliver the right mix of knowledge and skills
- Working closely with developers to support, not impede objectives and workflows

# Manage

The Saltworks team can help with the day-to-day management and tasks critical to the successful implementation of your customized application security program. We understand your DevOps pipeline and can plug in where and when you need us.

*Expertise where you need it, when you need it*

## On-Demand Application Security Expertise

- Operating as your development team's application security "help desk," to provide the right mix of expertise
- Standing in to compensate for a shortage of application security professionals and software engineers trained in security
- Either providing help or supplementing your in-house enterprise to execute your application security program

## Security Issues Management

As the security extension of your software development team, we will assist with the ongoing management of your application security program including:

- Working with agile teams
- Generating threat models or assisting your internal team in threat model generation
- Ensuring testing activities are being carried out appropriately
- Working with developers on remediation and fix verification
- Scheduling penetration testing

# Measure

## Metrics that Drive You Forward

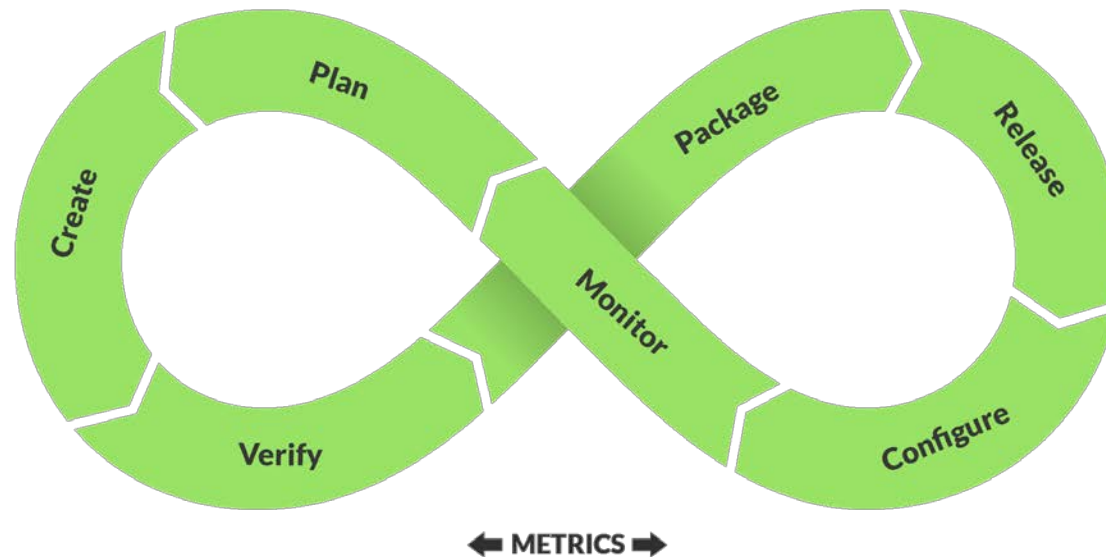

While historical metrics have their place, Saltworks is focused on providing you metrics that help with release decision-making. We'll plug into your DevOps pipeline and pull metrics out to validate the level of security vigor for each release cycle. Our unique measurement approach doesn't just look back, but rather helps drive you forward.

### Measurement at Speed

- Setting up and managing an ongoing metrics tracking program to ensure continuous improvement
- Helping you track program implementation and activity verification metrics

We also help you with:

- Providing reporting to audit and compliance teams
- Providing executive-level reports to demonstrate program value
- Reporting vulnerability metrics and identifying key trends

# App Sec in “A” DevOps Pipeline<sup>10</sup>

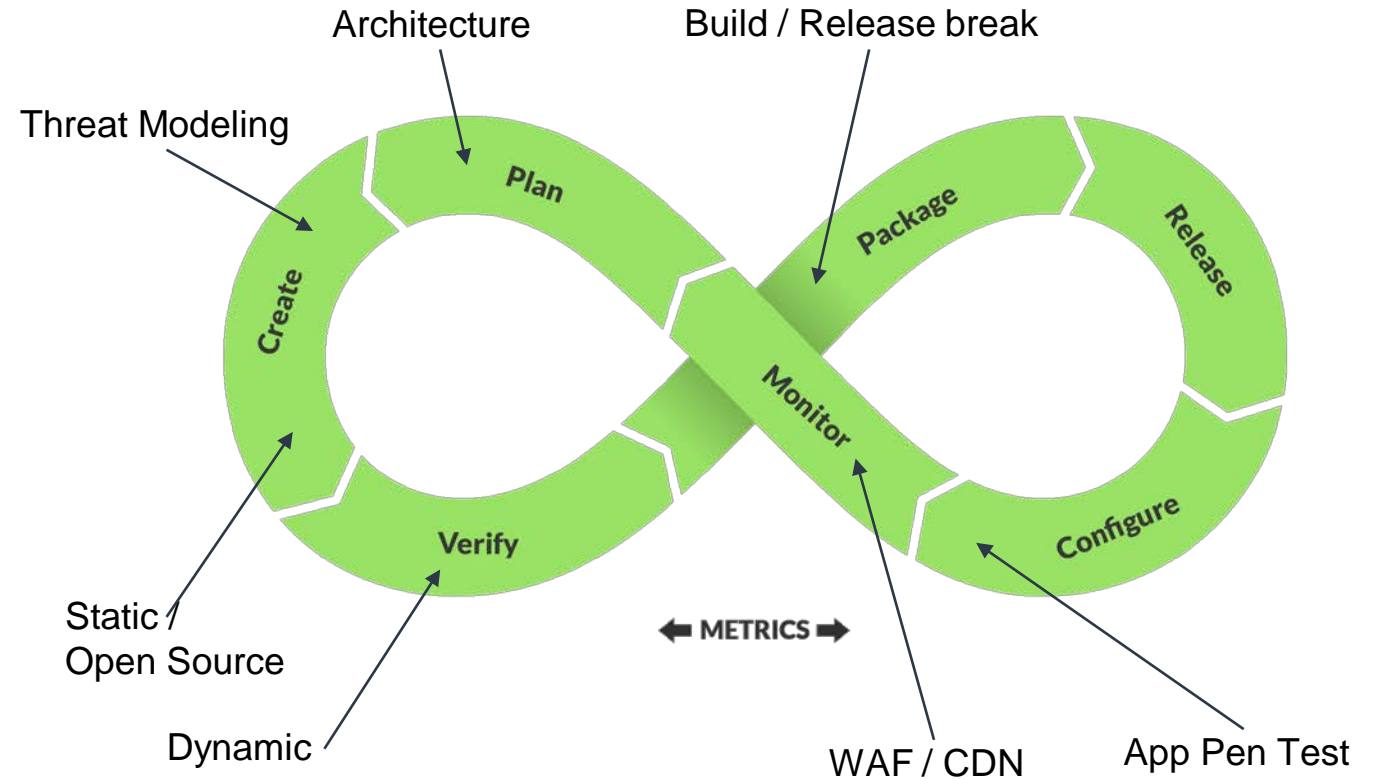

## Metrics: Practice and Vulnerabilities focused

### Cadence based metrics

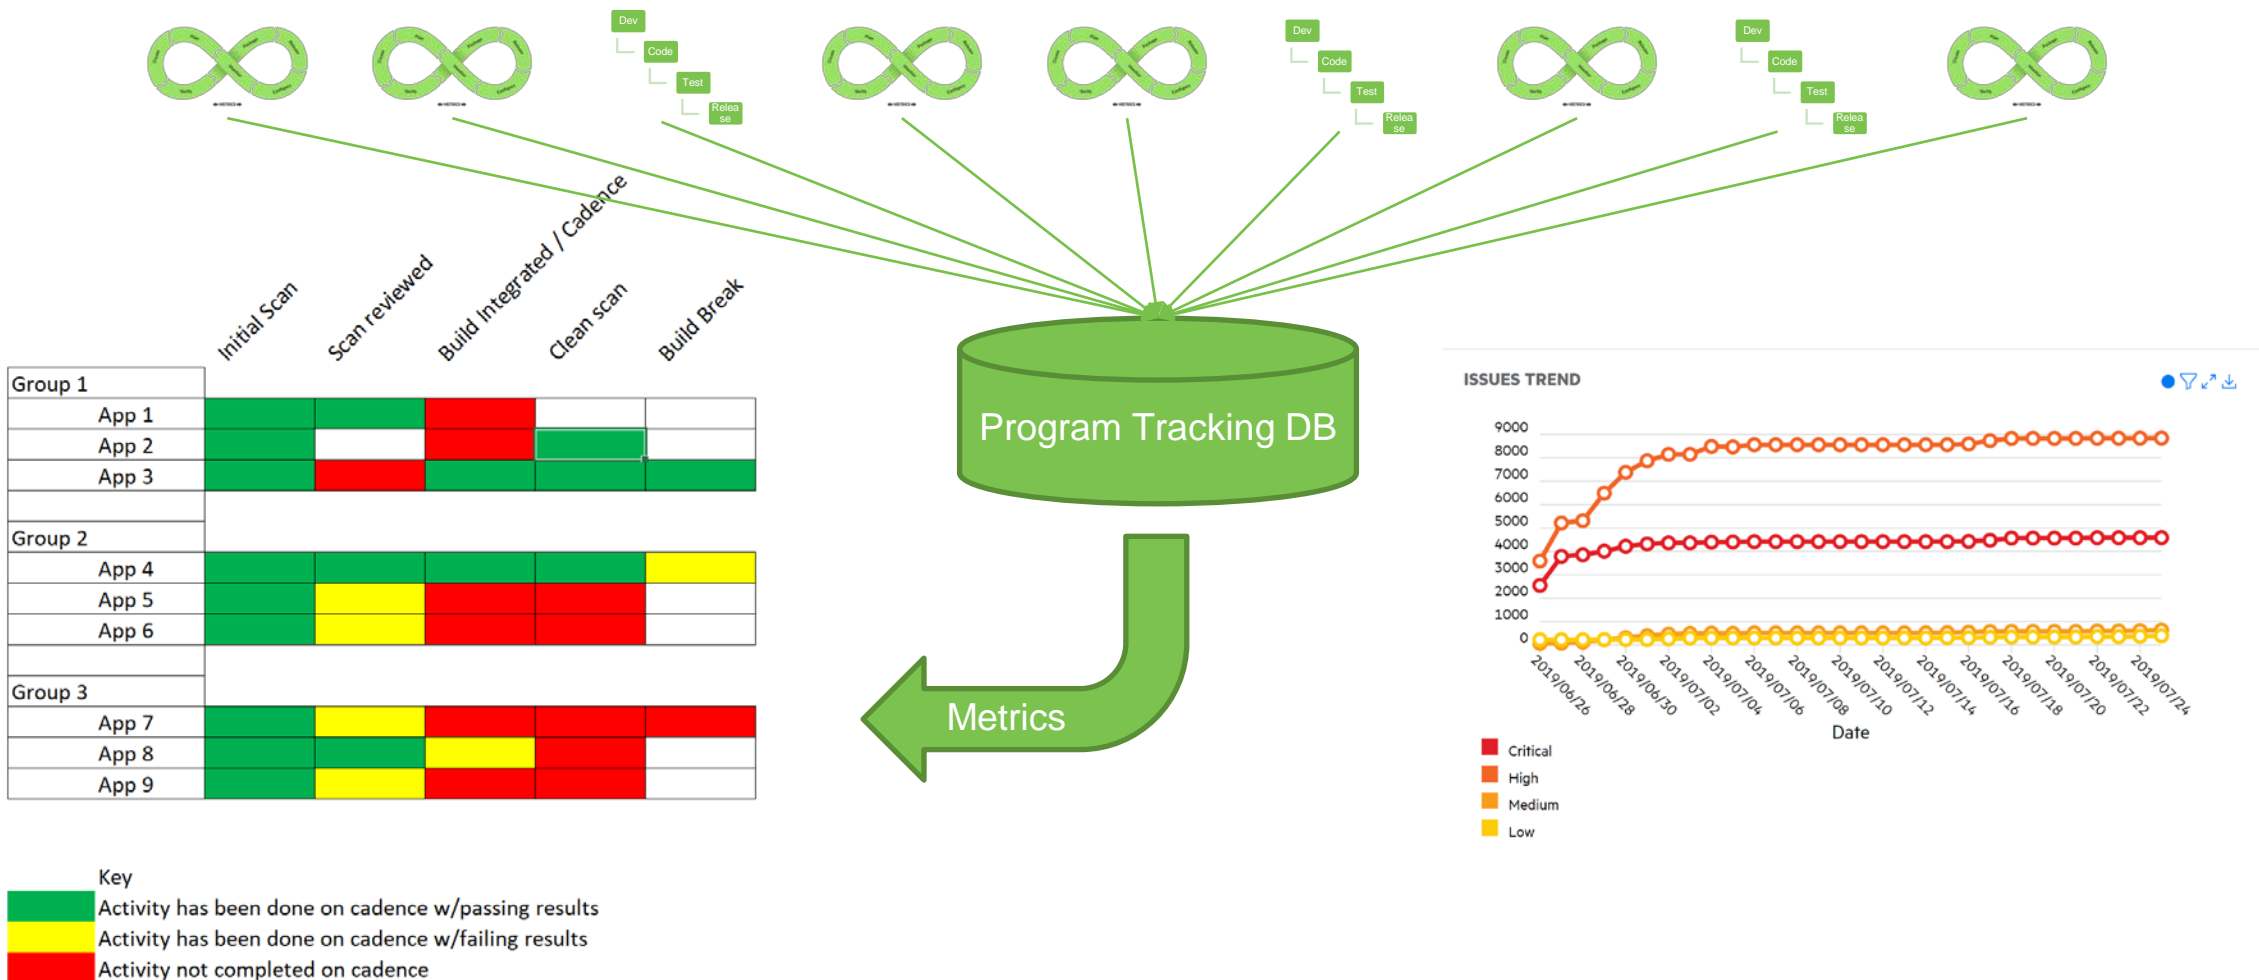

- Done periodically, not “in line”
- Architectural review completed
- Threat Model is up to date
- Passing Penetration Testing

### Inline, build break, metrics

- Static results
- Dynamic results
- Open Source results
- WAF events providing feedback on targeted areas

# Program (Enterprise) Level View 11

# Sec to Dev Program Tracking 12

## Development Teams

## Requests for Support

### App Onboarding

- Initial Static Scan
- Initial Dynamic San
- Scan Reviews
- Integration
- Build Break support
- Etc..

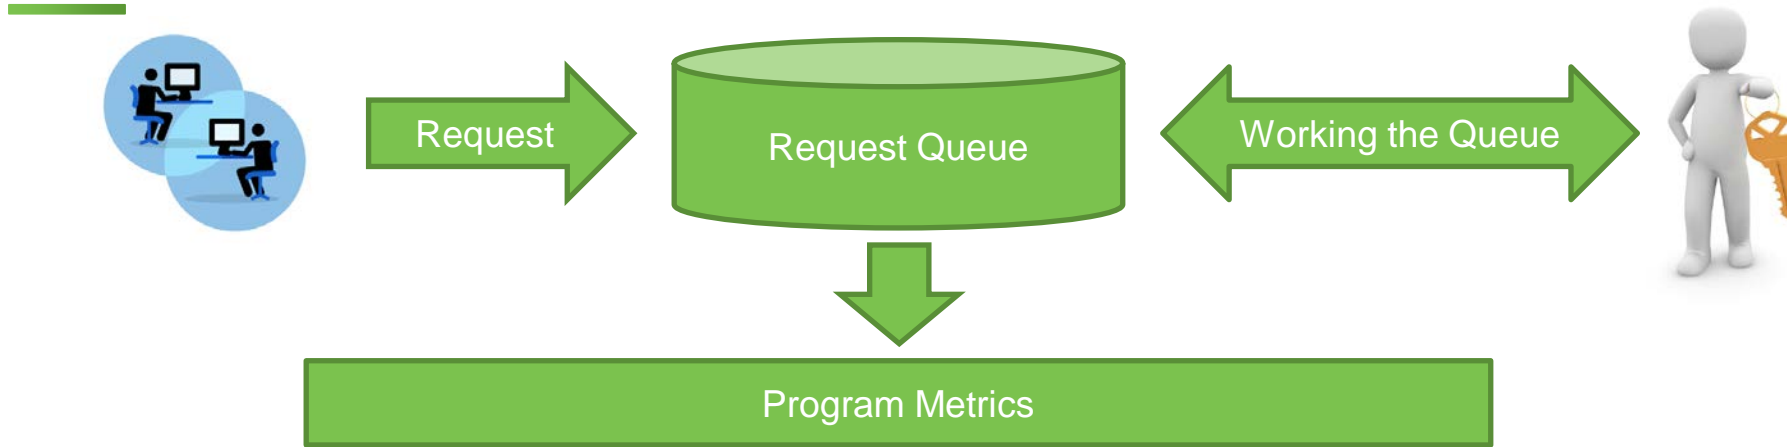

### Pen Tests

- Baseline
- Rescan
- Approvals
- Consulting

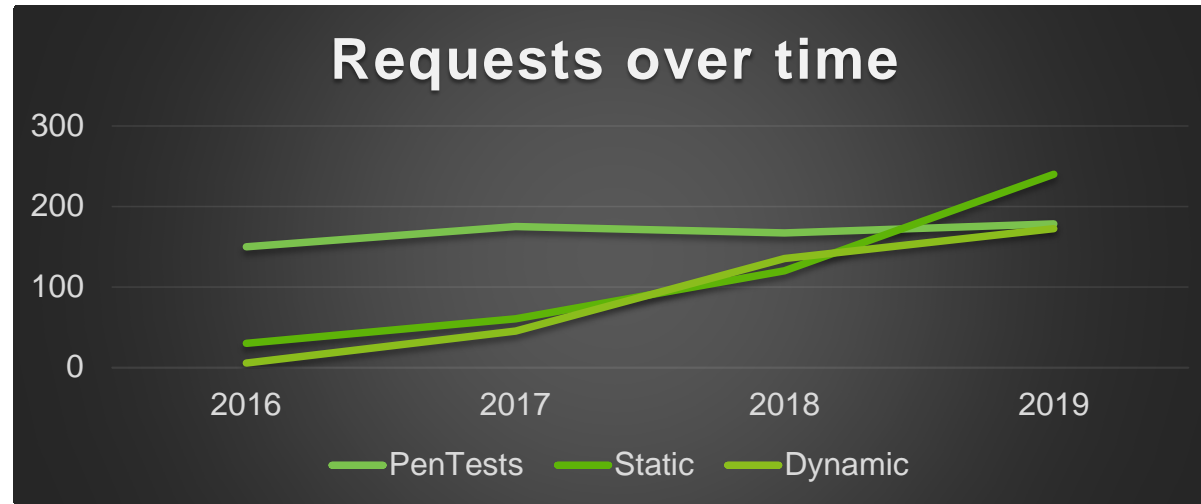

## Security Team

# Program tracking and performance metrics 13

Time to service by type	
Scan Review	1 day
Integration	.5 days
Baseline PenTest	10 days
Remediation PenTest	5 days

Program Service request tracking and performance metrics

# Thank You
