Confidential computer software. Valid license from Micro Focus required for possession, use or copying. The information contained herein is subject to change without notice.

The only warranties for Micro Focus products and services are set forth in the express warranty statements accompanying such products and services. Nothing herein should be construed as constituting an additional warranty. Micro Focus shall not be liable for technical or editorial errors or omissions contained herein.

No portion of this product's documentation may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying, recording, or information storage and retrieval systems, for any purpose other than the purchaser's internal use, without the express written permission of Micro Focus.

Notwithstanding anything to the contrary in your license agreement for Micro Focus ArcSight software, you may reverse engineer and modify certain open source components of the software in accordance with the license terms for those particular components. See below for the applicable terms.

US Governmental Rights. For purposes of your license to Micro Focus ArcSight software, "commercial computer software" is defined at FAR 2.101. If acquired by or on behalf of a civilian agency, the US Government acquires this commercial computer software and/or commercial computer software documentation and other technical data subject to the terms of the Agreement as specified in 48 CFR. 122.12 (Computer Software) and 122.11 (Technical Data) of the Federal Acquisition Regulation ("FAR") and its successors. If acquired by or on behalf of any agency within the Department of Defense ("DOD"), the US Government acquires this commercial computer software and/or commercial computer software documentation subject to the terms of the Agreement as specified in 48 CFR. 227.7202-3 of the DOD FAR Supplement ("DFARS") and its successors. This US Government Rights Section 18.11 is in lieu of, and supersedes, any other FAR, DFARS, or other clause or provision that addresses government rights in computer software or technical data.

Setting Up ArcSight Security Logger for Azure

Micro Focus Logger is available for deployment from the Azure Marketplace. It is designed as a virtual appliance containing the required operating system and the Logger software pre-installed.

Launching an Instance of Logger for Azure

This procedure assumes that you already have an Azure portal account.

1. Log in to the [Azure Marketplace](#) site with your existing Azure credentials.
2. Type Micro Focus Logger in the search box.
3. Select the latest version of Logger from the search results and click **Get It Now**.
4. A message window will be displayed. Click **Continue**.
5. In the Azure Portal, click **Create**.
6. Under the **Basics** tab, enter the following details about the virtual machine: **Subscription, resource group, virtual machine name, region, image, size, username, password** or **SSH public key**.

Note: Username must be entered as "centos". Recommended size for Logger instance should be at least B4ms.

7. To continue editing the other tabs, click **Next**. Otherwise, click **Review + Create**.
8. After all inputs have been validated, a message will be displayed. Click **Create** to start the virtual machine deployment.
9. Once the VM is ready, connect to it via SSH as **centos** user. Make sure to use the password or SSH key previously added in step 6.
10. To connect, restart or see more detailed information about your VM, click the **Go to Resource** button.

Configuring Logger for Azure

Perform the following steps to set a new password for the admin account, and then update the license key.

1. Locate the public or private IP address assigned to the Logger for Azure VM. Then, **ssh -i <private_key> <user>@<azure-assigned-address>**
2. Using sudo access, change the user to **arcsight**.
3. Start the application by running the following command: **/opt/arcsight/current/arcsight/logger/bin/loggerd start**
4. Execute the **tail /var/log/boot.log** to view the initial admin password.

Note: Actual `var/log/boot.log` file name is time stamped and will look like `/var/log/boot.log-20190221`

5. Set a new password for the admin account at: [Azure Portal](#)
 - Username: Admin
 - Password: Logger for Azure will request a password change after the first login.
6. Enable the port 9000 following these steps:
 - Go to the VM Overview in Azure. In **Settings**, select **Networking**.
 - Click **Add inbound port rule**.
 - In the **Destination port ranges**, type **9000**. To later identify the port added, update the **Name** field.
 - Click **Add**.
7. Update the license key of the Logger for Azure instance.

Note: After the license is uploaded, manually reboot the software. Select the **arcsight** user and run the following command to start Logger:
`/opt/arcsight/current/arcsight/logger/bin/loggerd start.`

Next Steps

Send logs to Micro Focus ArcSight Logger and search for events.

1. The ArcSight Logger instance has 2 Syslog SmartConnectors on UDP Receiver 8514 and TCP Receiver 8515. Configure your devices and applications to send Syslog events to the IP or Hostname of the ArcSight Logger instance.
2. Use ArcSight Logger to search for events.
3. If needed, deploy more SmartConnectors by launching the ArcMC image from the Marketplace.

Additional Information

For additional information on the use and operation of Arcsight Transformation Hub, see the Micro Focus Arcsight product documentation, available at the [Micro Focus Community](#).
