SECURITY

ZENworks provides the majority of tools customers need to manage, control, protect and troubleshoot endpoint devices, encompassing everything from client management to incident-based helpdesk with a unified management framework

Micro Focus ZENworks Suite

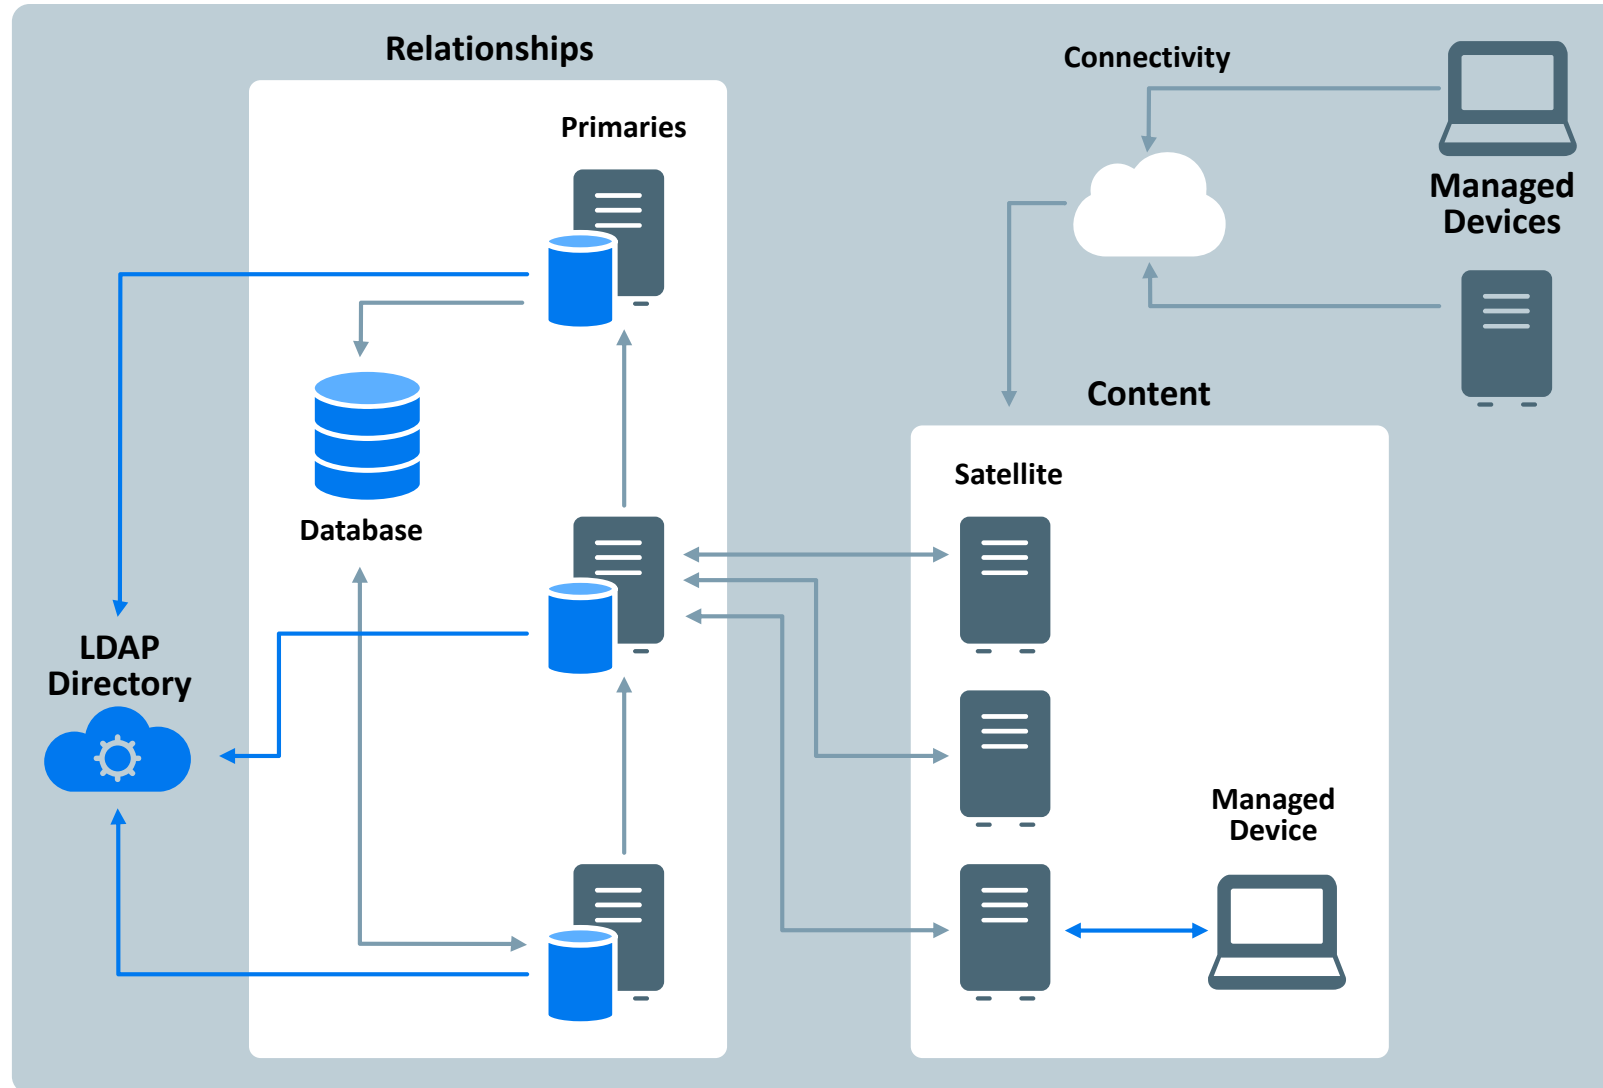

What does it do?

- Provides unified management for every one of the many (and often multiple) endpoints that users use in the enterprise
- Manage an entire fleet of endpoint devices from a single, unified console that IT can access anytime, from anywhere, over any standard web browser
- Manage endpoints remotely, without having to touch the device
- Automate IT tasks without the need for IT intervention
- Support user productivity: Set up a self-service “app store,”

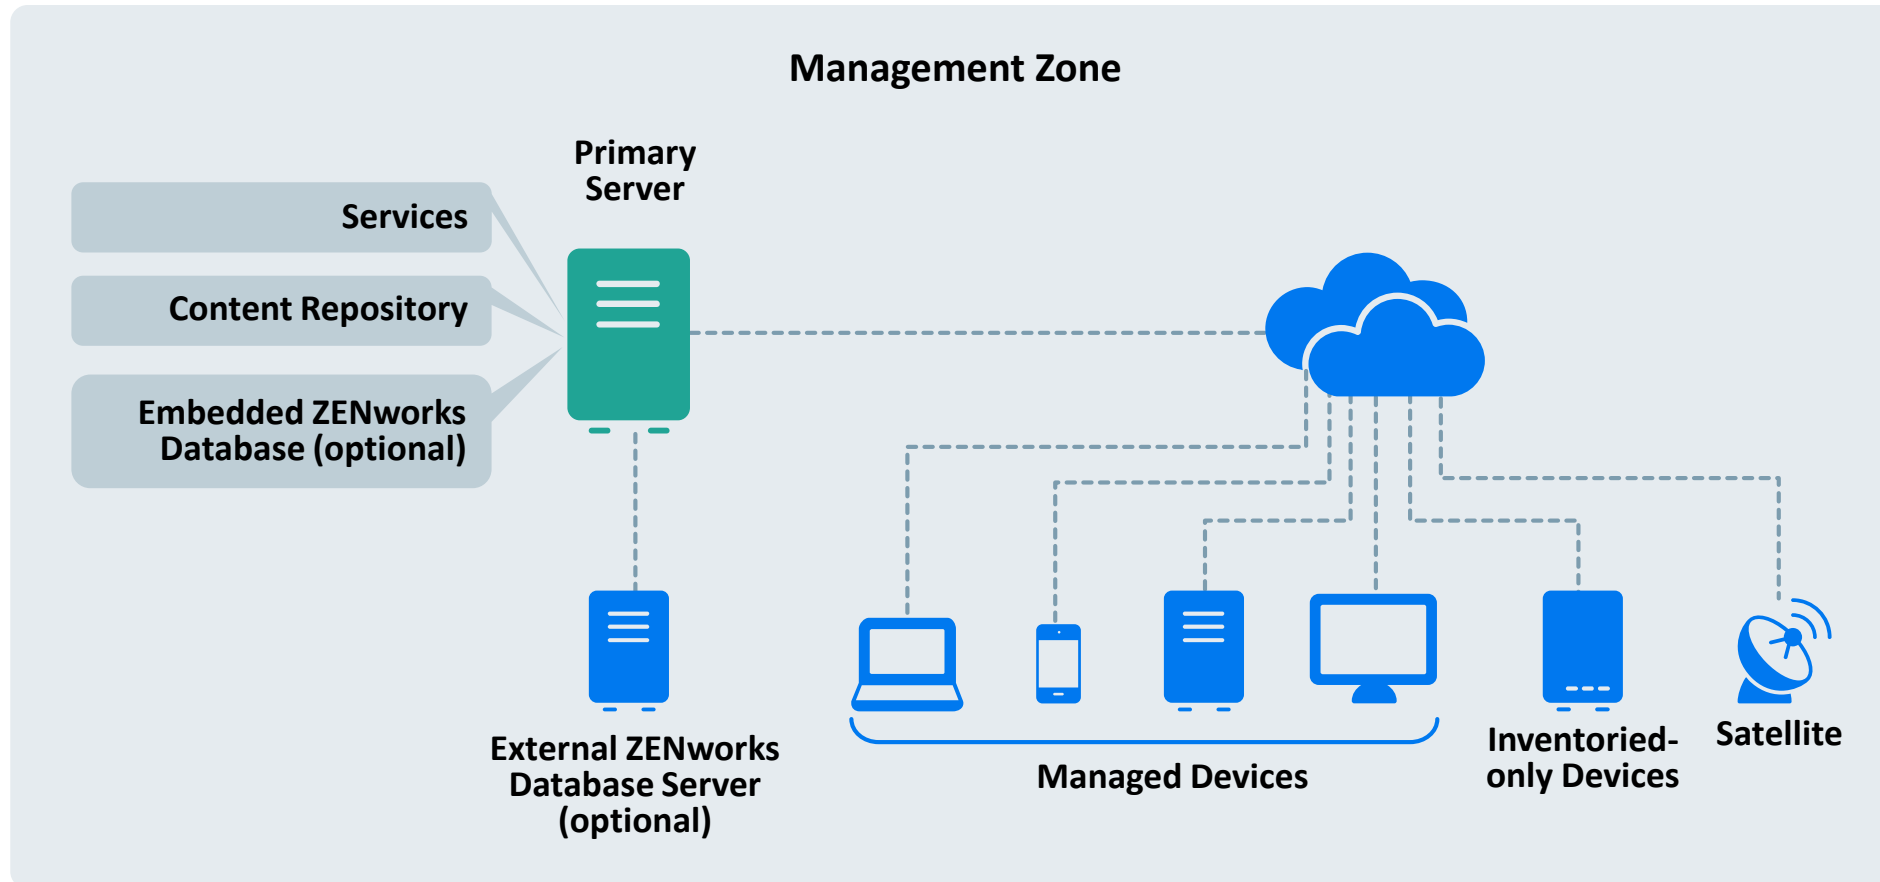

UEM Capabilities: ZENworks Suite®
